PROFESSIONAL SUMMARY

Software Engineer with 1.5 years of experience building production-grade SaaS and B2C platforms using Node.js, Express.js, NestJS, PostgreSQL, and React.js. Experienced in designing modular backend architectures, multi-tenant systems, secure authentication workflows, and scalable REST APIs. Contributed to live platforms including TheBusStand and CFO360.ai with a strong focus on backend scalability, maintainability, and system reliability.

WORK EXPERIENCE

Nubiznez Private Limited Software Engineer

Jan 2025 – Present

Financial Platform Backend (CFO360.ai — Multi-tenant SaaS Platform)

Key Contributions

- Designed a **modular monolithic backend architecture** using NestJS to improve maintainability, scalability, and clear domain separation.
- Structured the application using layered architecture (common, core, modules, shared, scripts, lib, config) to ensure clear separation of concerns.
- Built a **tenant-based schema migration runner** to dynamically manage and execute migrations across multiple tenant schemas.
- Built a reusable **document templating workflow** using Handlebars (HBS) to enable dynamic template customization and user-specific document generation.
- Developed **centralized migration workflows** and reusable script execution utilities for operational maintenance and environment management.
- Implemented secure authentication using access tokens, refresh tokens, and cookie-based session management.
- Integrated **Sequelize ORM** with **PostgreSQL** for relational database management and model relationships.
- Developed reusable infrastructure components including **authentication guards**, **exception filters**, **configuration modules**, and DTO-based request **validation pipelines** using class-validator.

Bus Booking Platform Development (TheBusStand.com)

Key Contributions

- Developed scalable REST APIs using **Node.js** and **Express.js** for supporting booking transactions, user management, and operational workflows for a live B2C ticket booking platform.
- Designed a modular backend architecture with reusable middleware, centralized logging, structured error handling, and secure authentication/encryption workflows using **RS256** JWT authentication and AES-based data encryption.
- Integrated **Razorpay** payment gateway to enable secure online ticket transactions.
- Implemented **PDF ticket generation** and automated notification systems via email, WhatsApp, and **Firebase notifications**.

CRM System Development (TheBusStand.com)

Key Contributions

- Implemented **role-based authentication and authorization** for employees and operators.
- Developed modules for **booking management**, **discount management**, and **bulk notification systems**.
- Designed analytics APIs and reporting workflows to support operational insights for booking trends, pricing, and business metrics.
- Integrated third-party APIs to enable operational automation and system integrations.

SKILLS

Languages: JavaScript, Java, SQL, Dart, TypeScript.

Frontend Technologies: ReactJs, React Hook, Bootstrap, Tailwind, Flutter, ThreeJs.

Backend Technologies: NodeJs, ExpressJs, Nestjs, Postgresql, Mysql, MongoDB.

Infrastructure & DevOps: Docker, Kubernetes, Nginx, GitHub Actions, AWS EC2.

Architecture Patterns: Microservices, Modular Monolithic Architecture, REST API Design, Multi-Tenant Architecture

Design Principles: SOLID Principles

Tools & Messaging: Kafka, Zookeeper, n8n, Postman, Swagger, Git.

EDUCATION

Bachelor of Science in Computer Technology

Sri Krishna Adithya College of Arts and Science, Coimbatore

Apr 2017 - Mar 2020
